UNITED STATES INTELLIGENCE BOARD  
INTELLIGENCE INFORMATION HANDLING COMMITTEE

MEMORANDUM FOR THE RECORD

SUBJECT: Meeting of the Content Control Code Group

A meeting of the Content Control Code Group was held at CIA at 0930, 22 June 1971. Present were [redacted] of DIA DS: [redacted] of NSA (replacing [redacted] and [redacted] of CIA; and [redacted] of the IHC Support Staff. [redacted] was a last minute replacement for [redacted] of DIA DS4, who with [redacted] will probably attend future meetings, hopefully.

For the benefit of the new people in the group (only [redacted] had been with the group from the first meeting), Mr. [redacted] gave a short background briefing on the history of the group and its goals.

CIA Tests

[redacted] next gave a progress report on CIA's activities. They had been following a very practical and pragmatic approach, following where their test results led them. Their dissemination system for electrically received SI product based on text processing, should go on the air in the middle of next month (July). Initially, the CCC will not be used in conjunction with the text search (dual system), but that capability is built into the software and will eventually follow as CCC or its replacement becomes accepted by the Community. CIA/CRS is negotiating for the four commo lines of State telegrams (forwarded to CIA by the State Automated Terminal Station). These 400 or so telegrams a day will be machine stored for an experiment in retrospective searching, over and above the Aegis System--an information storage and retrieval test. Lastly, next month CRS will begin analyzing the six weeks of recordings of [redacted] which were content coded with the A-2/revision of CCS. The hold-up on the analysis
